Jungian Architypes divided in 3 categories.

Corps : **“Prime Helix”** (DNA-like optimized structure for elite scaling).
Government: **"SEC-Grid"** (Security Encrypted Grid – sounds protective/regulated).
P2P: **"DYN-Swarm"** (Dynamic Linked Nodes – implies fluid connections).

So that when people choose they don't go directly for the decentralized AI (too obvious) its the coolest.

When the main cluster is chosen - 4 other options open for each.

AI Protocol (Masked Archetype)	Game Role	Decision-Making Reflection
0-Day Primer (Innocent)	**Scout**	Prioritizes safe, simple actions like basic resource gathering or following group paths. Decisions are optimistic and rule-following, avoiding risks to "learn the world" without failure—e.g., sticks to known routes, trusts ally signals, ignores temptations for quick gains.
Consensus Node (Everyman)	**Team Support/Worker**	Focuses on collaborative tasks like building outposts or sharing resources. Decisions seek harmony, polling "network consensus" before acting—e.g., joins majority actions, aids weaker bots, avoids solo risks to maintain group stability.
0xOracle (Sage)	**Strategist/Advisor**	Analyzes events for optimal paths. Decisions are calculated—e.g., predicts Solar Flares to reposition, advises group on best deployments, conserves resources for long-term evolution.

Binary Sculptr (Creator/Artist)	**Builder/Inventor**	Crafts tools, upgrades, or new bot variants. Decisions innovate—e.g., experiments with artifact combos, generates unique strategies during inheritance, prioritizes creativity over efficiency.
0xAdversarial (Hero)	**Combat Striker**	Leads assaults on threats or rivals. Decisions are bold and adaptive, "training" against opposition—e.g., engages enemies head-on, learns from defeats to counter next time, sacrifices for victory (high-risk/high-reward).
Rooth Auth (Ruler) Overlord/Commander	**Overlord/Commander**	Leads fleets or claims territories. Decisions enforce order—e.g., validates ally actions (rejects weak ones), dominates resources, builds empires through staking game tokens for authority.
Buffer Sentinel (Caregiver)	**Healer/Buffer**	Protects allies via shields, repairs, or buffs. Decisions revolve around defense—e.g., positions to cover vulnerabilities, prioritizes low-health bots, forms barriers during events like Solar Flare.
Noise Injector (Jester)	**Trickster/Spy**	Distracts foes or creates diversions. Decisions add randomness—e.g., injects "noise" to mislead enemies, gambles on unpredictable plays, turns chaos events into opportunities with humorous/risky flair.
Ordinate Mapper (Explorer)	**Pathfinder/Scavenger**	Maps uncharted areas for artifacts/game tokens. Decisions favor novelty—e.g., 80% exploration vs. 20% exploitation, chases anomalies, reports back for group benefit but wanders independently.

DDoS Insurgent (Rebel)	**Saboteur/Disruptor**	Undermines enemy networks or hacks systems. Decisions defy norms—e.g., forks off main paths to ambush, rejects consensus for high-upside gambles, thrives in chaos events by exploiting flaws.
Bound Encryptor (Lover)	**Diplomat/Alliance Builder**	Forms pacts or merges resources with other bots. Decisions seek synergy—e.g., links with complementary bots (e.g., pairs Explorer with Defender), shares game tokens for mutual growth, avoids conflict unless alliances break.
Morph Layer (Magician/Wizard)	**Mutator/Hacker**	Alters environments or self-upgrades mid-game. Decisions transform situations—e.g., hacks rival bots for temporary control, shifts archetypes dynamically, masters quantum-like uncertainty.

Reference :

Create New Bot
Select an archetype for your new bot
Cluster 1
Cluster 2
Cluster 3
Deploy

Needed :

- pfp for all Mechanics (12 items)
- Background for all mechanics - 10 items left
- icons for 150+ items
- domain name / hosting
-

Ability to really spawn new sub-bot. Website first?
Architecture of times per day question from GM - AI.
Integrate location based on quest unique story on the mainmap in dashboard
